Marcel Mazoyer, Laurence Roudart : A History of World Agriculture: From the Neolithic Age to the Current Crisis before purchasing it in order to gauge whether or not it would be worth my time, and all praised A History of World Agriculture: From the Neolithic Age to the Current Crisis:

1 of 2 people found the following review helpful. An excellent overview of agricultural systems from the Neolithic to today
By Epimetheus
An excellent overview of agricultural systems from the Neolithic to today. Particularly helpful for understanding the challenges faced by peasant farmers today.

Interesting and informative
By Kyle Wilshusen
The best agricultural history out there in my opinion. The text is historical, but it connects to the modern day. There are facts, but the text is not preachy at all. Interesting and

informative.0 of 2 people found the following review helpful. good food for thoughtBy Ying-Hong LiIt's an eye opening experience of reading the book. It a world of global economy, farmers in developing countries are struggling very hard

Only once we understand the long history of human efforts to draw sustenance from the land can we grasp the nature of the crisis that faces humankind today, as hundreds of millions of people are faced with famine or flight from the land. From Neolithic times through the earliest civilizations of the ancient Near East, in savannahs, river valleys and the terraces created by the Incas in the Andean mountains, an increasing range of agricultural techniques have developed in response to very different conditions. These developments are recounted in this book, with detailed attention to the ways in which plants, animals, soil, climate, and society have interacted. Mazoyer and Roudart's *A History of World Agriculture* is a path-breaking and panoramic work, beginning with the emergence of agriculture after thousands of years in which human societies had depended on hunting and gathering, showing how agricultural techniques developed in the different regions of the world, and how this extraordinary wealth of knowledge, tradition and natural variety is endangered today by global capitalism, as it forces the unequal agrarian heritages of the world to conform to the norms of profit. During the twentieth century, mechanization, motorization and specialization have brought to a halt the pattern of cultural and environmental responses that characterized the global history of agriculture until then. Today a small number of corporations have the capacity to impose the farming methods on the planet that they find most profitable. Mazoyer and Roudart propose an alternative global strategy that can safeguard the economies of the poor countries, reinvigorate the global economy, and create a livable future for mankind.

A magnificent book, by far the best ever produced on the subject.' Samir Amin 'Replete with rich reflections on agriculture . . . It is a testament to the enormous erudition of its authors and a defense of peasant economies victimized by neoliberal policies.' *Le Matin* (France) 'This book is a major contribution to the analysis of agricultural history as well as to reflection on the long term economic, social and environmental development of society.' Michel Griffon, *Hum Ecol* (2008) About the Author Marcel Mazoyer is professor of comparative agriculture and agricultural development at the National Institute of Agronomy (INA) in Paris, where he succeeded Rene Dumont. He is the author of several books on the history of agriculture and has worked on agricultural policy in more than twenty countries. Laurence Roudart is an agricultural engineer and researcher at the National Institute of Agronomy (INA) in Paris, and has consulted extensively on agriculture in Africa and Asia.
