F. Bailey Norwood, Pascal A. Oltenacu, Michelle S. Calvo-Lorenzo, Sarah Lancaster : Agricultural and Food Controversies: What Everyone Needs to Knowreg; before purchasing it in order to gage whether or not it would be worth my time, and all praised Agricultural and Food Controversies: What Everyone Needs to Knowreg::

4 of 4 people found the following review helpful. I would recommend this book to all who want to be well ...By PhilippidesI would recommend this book to all who want to be well informed about our food. Well explained, with scientific rigor, the book explain the main food controversies. I enjoyed reading it.The authors are subject matter

experts. Bottom line: be reassured, what we eat is safe. 0 of 0 people found the following review helpful. One Star
By Adam Glynn I didn't feel like it added much to the conversation. 0 of 0 people found the following review helpful. They
needed this book for a class and was happily surprised when it was very informative I learned a lot from the class and
the book

The world is more interested in issues surrounding agricultural and food issues than ever before. Are pesticides safe? Should we choose locally grown food? Why do some people embrace new agricultural technologies while others steadfastly defend traditional farming methods? In the debates about organic food, genetically modified organisms, and farm animal welfare, it's not always clear what the scientific studies are actually telling us. To understand these controversies and more, the authors of *Agricultural and Food Controversies: What Everyone Needs to Know* begin by encouraging readers to develop an understanding of how two well-educated people can form radically different opinions about food. Sometimes the disputes are scientific in nature, and sometimes they arise from conflicting ethical views. This book confronts the most controversial issues in agriculture by first explaining the principles of each side of the debate, guiding readers through the scientific literature so that they can form their own educated opinions. Questions asked: - Are organic foods truly better for your health? - Are chemical fertilizers sustainable, or are we producing cheap food at the expense of future generations? - What foods should we eat to have a smaller carbon footprint? - Does buying local food stimulate the local economy? - Why are so many farm animals raised indoors? - Should antibiotics be given to livestock? - Is genetically-modified food the key to global food security, and does it give corporations too much market power? - Is the prevalence of corn throughout the food system the result of farm subsidies? Providing a combination of research and popular opinions on both sides of the issue, *Agricultural and Food Controversies: What Everyone Needs to Know* allows readers to decide for themselves what they personally value and believe to be important when it comes to their food.

About the Author All authors are present or former faculty members in the College of Agricultural Sciences and Natural Resources at Oklahoma State University. Their commonality is their commitment to helping the public understand agricultural issues through their teaching, research, and writings. F. Bailey Norwood is an Associate Professor of Agricultural Economics at Oklahoma State University. His previous works include *Compassion by the Pound: The Economics of Farm Animal Welfare and Agricultural Marketing and Price Analysis*, an undergraduate textbook. Michelle S. Calvo-Lorenzo is an Assistant Professor of Livestock Well-Being and Environmental Management in the Department of Animal Science at Oklahoma State University. Sarah Lancaster is an Extension Scientist at the Range Cattle Research and Education Center at the University of Florida. Pascal A. Oltenacu is a Professor in the Department of Animal Science at the University of Florida.
